acticheck

## How proactive monitoring can assist early intervention

From a sample of just 14 hospital discharge users across 1 week

Chart legend: Shock · Innactive day · Restless Night · Shock cancelled by wearer · Escalated to Responder

Over 85% wear rate
Meaning significantly more protection and data than standard TEC at 10-20% wear rate

False alarm Falls that don't need to escalate
47 occasions where other TEC may have called the ARC, which may lead to unnecessary call outs or emergency services
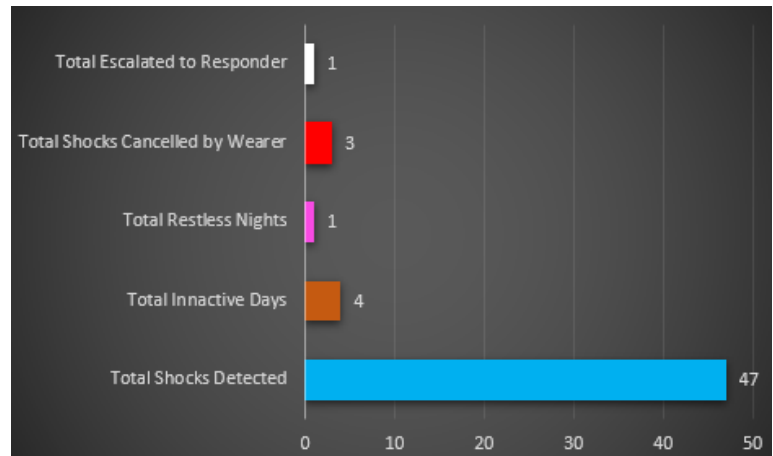

Early intervention opportunities
5 occurrences of unusual day or night behaviour offering the chance to investigate to avoid larger issues

Wearer false alarms
3 alerts that were able to be confirmed as false alarms by the wearer themselves, avoiding ARC escalation
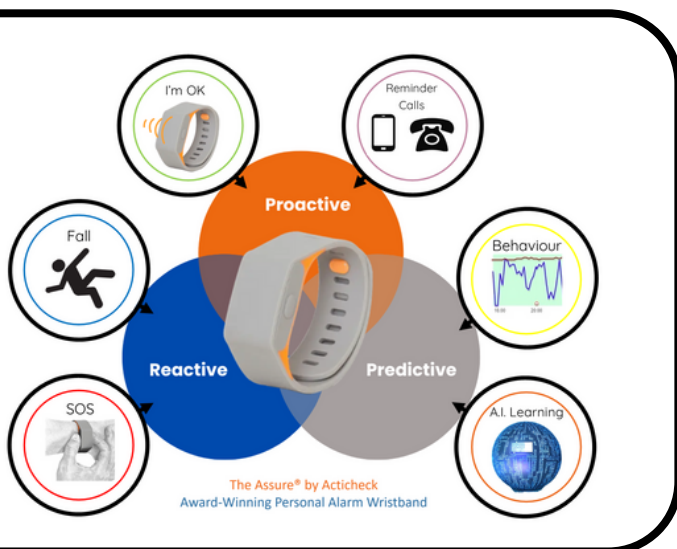

Actual escalations
Across 2,352 hours of protection only 1 alert needed to escalate to external support improving quality of life and reducing resources

Category	Value
Total Escalated to Responder	1
Total Shocks Cancelled by Wearer	3
Total Restless Nights	1
Total Innactive Days	4
Total Shocks Detected	47
