# PanPan Smartwatch

Dublin, Ireland

[info@panpan.watch](mailto:info@panpan.watch)

**PanPan Smartwatch** is designed to offer peace of mind to independent seniors and their families – whether at home or out and about.

PanPan allows two-way emergency voice calls, location reports and fall detection alerts; with an easy to use, single-button design. It can also measure heart rate and steps.

## Who is it for?

A simple design, standard look and long-lasting battery, make PanPan an ideal safety device for seniors who live independently; specially in case of:

- Accidents
- Medical emergencies
- Early dementia
- Crime threats

## How does it work?

This watch has a single button. Every time you press it, it displays a screen: time and date, heart rate measuring or step counting. When pressed and held, the button triggers an SOS voice call to the telecare center.

PanPan is equipped with location capability, so carers can receive a location report along with the emergency call, or be alerted if the user has left a predefined geofence or safety area.

## Key Features

- One button emergency calls
- Two-way phone calls
- Live locations, location lookup, geo-fencing
- Fall detection and response
- Heart rate monitoring
- Pedometer / Activity recording
- Integrated with PanPan platform

## Technical Specifications
